Proposed Change:	At the FIMS Ad Hoc Historical Data Screen it would make sense to have our "saved reports" from the Current Data Screen available to us for use on the Historical Data Screen.				
Justification:	<p>For data quality assurance reasons we have the need to compare historical data with our current FIMS data. If I create a report to look at the current data at the Current Data Screen it only makes sense that I would want to use that same report to see the Historical data by going to the Load Report drop down menu and selecting the desired report. Right now I have to build the same report twice. Once at the Current Data Screen and again at the Historical Data Screen. Our "custom reports" should only have to be created once and should be available from the Load Report area no matter which screen you are at (Current or Historical).</p> <p>Thanks for your consideration! Steve</p>
